Q14. You have made a change to the properties of a server within the Central Management Console. How do you know that the changes you have made require a server restart before the changes will take effect?
* The server is flagged as Stale within the Servers area.
* The server does not have a unique Process ID number for the PID server in the Servers area.
* The server is shown as Disabled within the Servers area.
* The server’s Health indicator is grayed out in the Servers area.

Q15. What is the function of a universe in the BI platform?
* It acts as the translation layer between a Web browser and the BI platform.
* It provides Extract, Transform, and Load capabilities.
* It stores reporting data.
* It serves as a semantic layer for business users.

Q16. You have successfully opened a Web Intelligence document that is based on a Universe (UNX). However, when you refresh

the document, you get an error message. What servers would you initially investigate to troubleshoot this error? Note: There are 2 correct Answers to this question.
* Web Intelligence Processing Server
* Input File Repository Server
* Adaptive Processing Server
* Adaptive Job Server

Q17. Which of the following tasks can you perform in the Central Management Console to manage servers?

Note: There are 3 correct answers to this question.

Response:
* Change the Central Management Server repository
* Display server metrics, such as system RAM and disk space allocation.
* Stop and start server nodes and specific servers.
* Create new servers or clone existing servers for vertical scalability.
* Createa new Server Intelligence Agent for horizontal scalability.

Q18. In what application mode can you freeze column headers?

Please choose the correct answer.
* Data
* Design, With Data
* Reading Mode
* Design, Structure Only

Q19. Why would you need to change the data source for your query?

Please choose the correct answer.
* To change the universe connection of your universe
* To use the production universe instead of the test universe
* To use different objects from the universe
* To change the order of execution for existing queries

Q20. Which of the following tasks are performed by the Central Management Server?

Note: There are 2 correct answers to this question.
* Restart servers that have stopped unexpectedly.
* Manage auditing.
* Retrieve documents from the Input File Repository Server.
* Maintain a list of servers and IP addresses.

Q21. What do you have to consider when defining an instance management plan?

Note: There are 2 correct answers to this question.
* The duration period for retaining instances
* The maximum number of retained instances
* The available storage space on the Input File Repository Server
* The number of job servers generating instances

Q22. What are the benefits of using Federation?

Note: There are 2 correct answers to this question.
* It reduces the number of objects in multiple systems across geographical sites.
* It enables a consistent rights policy across multiple offices for global organizations.
* It provides real-time information on user activities, system KPIs, recent alerts, and watches.
* It obtains information faster by processing reports at remote sites where data resides.

Q23. You want to deploy SAP BusinessObjects BI 4.3 for 10000 users in total. As part of this deployment, the customer needs to ensure that the system is sized and scaled correctly. How many active concurrent users should you use for the initial estimate?
* 1000 active concurrent users
* 5000 active concurrent users
* 100 active concurrent users
* 10000 active concurrent users

Q24. You need to restart an Adaptive Job Server that is currently processing requests. What is the correct process to restart an Adaptive Job Server?
* Disable the Adaptive Job Server, wait for job completion, and restart the Adaptive Job Server.
* Restart the Central Management Server and restart the Adaptive Job Server.
* Stop the Web Application Server and restart the Adaptive Job Server.
* Stop the Adaptive Job Server, wait for job completion, and start the Adaptive Job Server.

Q25. How does rearranging the objects in the Result pane after the query has run affect the block display?

Please choose the correct answer.
* The objects are rearranged in the block based on the order in the Results Objects pane.
* The reordered objects are removed from the block.
* The block is sorted in ascending order based on the first object in the Results Objects pane.
* The block remains unchanged.

Q26. You delete a user account. The user owned several objects located in public folders. What happens to those objects?
* They are assigned to the Administrator account.
* They are assigned to the highest level group to which the user belonged.
* They are deleted, and the historical instances are archived.
* They are archived, and the historical instances are deleted.

Q27. You want to clone an existing server within the Central Management Console (CMC). Which of the following checks are required before performing the clone? Note: There are 2 correct Answers to this question.
* The target machine for the cloned server has the required binaries for the BI platform server installed.
* There are no other users logged onto the system.
* The server to be cloned is stopped or disabled.
* All machines in your deployment have the same version of BI platform.

Q28. You are experiencing errors in Web Intelligence across a clustered environment and need to perform an end-to-end trace to debug further. Where would you configure the global trace level settings to ensure that you retain enough traces?
* In the trace log properties of each Web Intelligence Processing Server.
* In the bo_trace.ini file located on the configuration directory of the BI installation.
* In each individual host operating system’s trace level settings.
* In the Next Step trace level within the SAP Client plug-in.
