Understanding functional and technical aspects of B2C Commerce Developer with SFRA

The following will be asked from you in the **SALESFORCE CCD-102 exam dumps**:

- Given a situation, use search channels, field sets, and custom activities to empower item determination and design **NO.70** Universal Containers wants to add a model field to each product. Products will have locale-specific model values. How should the Digital Developer implement the requirement?

* Set the model field as a localizable attribute.
* Store translated model values in different fields; one field for each locale.
* Add model to a new custom object with localizable attributes.
* Utilize resource bundles for translatable values.

NO.71 Which three operations should be done in a controller?

Choose 3 answers

* Generate the response as JSON or HTML
* Use the Script API to generate data for the view.

* Use middleware functions when applicable
* Create a plain JavaScript object representing a system object
* Use the model needed for the view.

NO.72 The following code ensures that an address ID CANNOT be used if it is already in use by another address in the customer’s address book. There is a problem with the code. The error message for an invalid address ID is never shown to the user on the form field.

```
if (address.ID !== addressForm.addressid.value) {
    for (var i = 0; i < addressBook.addresses.length; i++) {
        if (addressBook.addresses[i].ID === addressForm.addressid.value) {
            addressForm.invalidateFormElement();
            throw new Error('Address name already exists');
        }
    }
}
```

How should the Digital Developer resolve this issue so that the error message is displayed on the address ID form field?
* addressForm.invalidateFormElement(“addressid”);
* addressForm.addresssid.invalidateFormElement = true;
* addressForm.invalidateFormElement(addressForm.addressid);
* addressForm.addresssid.invalidateFormElement();

NO.73 A Digital Developer added a file named MyBusinessController.js in the cartridge named app_project. The project design calls for this new file to override MyBusinessController.js in client_project. The client_project cartridge contains other necessary functionality. Additional functionality is also included in the storefront_core and storefront_controllers cartridges.

Which cartridge path meets the project requirements?
* client_project:app_project:storefront_controllers:storefront_core
* app_project:storefront_controllers:storefront_core
* app_project:client_project:storefront_controllers:storefront_core
* storefront_core:storefront_controllers:client_project:app_project

NO.74 A developer is given a task to implement a new Page Designer layout component that doesn’t accept certain asset components.

How should the developer achieve the above task?
* Add component_type_inclusion in the layout json configuration
* Add component_type_Exclusions in the layout json configuration
* Add layout_type_inclusion in the target components json configurations.
* Add layout_type_exclusion in the other asset components json configuration.

NO.75 Universal Containers sells physical gift cards for the holidays.

What needs to occur to guarantee the cards will always be available?
* Create a perpetual inventory record.
* Create an inventory record with Backorder Handling enabled.
* Create an inventory record with an extremely high Allocation value (i.e., 1 billion certificates).
* Create an inventory record with an unlimited Allocation value.

NO.76 A developer needs to update the package.json file so that it points to the hock file for a cartridge, using the hooks keyword. Which snippets work correctly when added to the file?:

* { "hooks": "./cartridge/scripts/hooks.json" }

* { "hooks": "./scripts/hooks.json" }

* { hooks: "./cartridge/scripts/hooks.json" }

* { hooks: ./scripts/hooks.json }

NO.77 A job executes a pipeline that makes calls to an external system.

Which two actions prevent performance issues in this situation? (Choose two.)
* Use synchronous import or export jobs
* Configure a timeout for the script pipelet.
* Disable multi-threading.
* Use asynchronous import or export jobs.

NO.78 Given the above OCAPI definitions, which permission or permissions apply?
* Allows external applications to create coupons
* Allows external applications to create, update, and delete coupons
* Allow external applications to create, update, and delete both coupons and coupon codes
* Allows external applications to update coupons

NO.79 A Digital Developer has a site export file on their computer that needs to be imported into their sandbox. How should the developer update their sandbox with the data in this file?
* Upload and import the file using the local option within the Site Import & Export Business Manager module.
* Connect and import the file using the remote option within the Site Import & Export Business Manager module.
* Upload the file to the Static WebDAV directory and import using the Import & Export Business Manager module.
* Upload the file to the Impex WebDAV directory and import using the Site Import tool within UX Studio.

NO.80 A client sells its product in single-brand stores as well as in multi-brand stores. When shown in the store locator list, the client wants the single-brand stores to have a particular background color to highlight them.

Which Business Manager action should be completed to allow the developer to apply different styling to the single-brand stores?
* Add a Boolean custom attribute to the Store system object
* Configure the existing Store custom object type definition
* Create a new SingleBrandStore custom object configuration.
* Adjust the relevant Site Preference in the Stores group

NO.81 Which line of code creates a content slot that can be included on homepage.isml to display on the home page?
* <isslot id="my_banner " description="for home page" type="global" context="content" context-object="${pdict.ContentSearchResult.content}"/>
* <isslot id="my_banner " description="for home page" type="global" context="homepage"/>
* <isslot id="my_banner " description="for home page" context="global">
* <isslot id="my_banner " description="for home page" context="global" context-object="${pdict.CurrentHomePage}"/>

NO.82 The following code ensures that an address ID CANNOT be used if it is already in use by another address in the customer's address book. There is a problem with the code. The error message for an invalid address ID is never shown to the user on the form field.

```
if (address.ID !== addressForm.addressid.value) {
    for (var i = 0; i < addressBook.addresses.length; i++) {
        if (addressBook.addresses[i].ID == addressForm.addressid.value) {
            addressForm.invalidateFormElement();
            throw new Error('Address name already exists');
        }
    }
}
```

How should the Digital Developer resolve this issue so that the error message is displayed on the address ID form field?

* addressForm.invalidateFormElement(“addressid”);
* addressForm.addresssid.invalidateFormElement = true;
* addressForm.invalidateFormElement(addressForm.addressid);
* addressForm.addresssid.invalidateFormElement();

NO.83 Which two methods are efficient and scalable? (Choose two.)

* ProductMgr.queryAllSiteProducts()
* ProductSearchHit.getRepresentedProducts()
* ProductSearchModel.getProductSearchHits()
* Category.getProducts()

NO.84 A Digital Developer wants to selectively retrieve products and process them from an (Phone. Which action should the Developer take, given that JavaScript controllers CANNOT be used?

* Create a webservice to retrieve products.
* Use import/export in Business Manager.
* Use WebDAV Client to retrieve products.
* Use OCAPI and invoke it in native language.

NO.85 Given the following conditions:

* Site export file with a copy of the Storefront data for a custom site

* Sandbox with the custom site code, but no Storefront data

* Requirement for a working copy of SFRA for development reference

A developer is assigned the following Business manager tasks:

* A: Import the custom Site using Site Import/Export

* B: Import the SFRA Demo Sites using Site Import/Export

* C: Rebuild the custom Site search indexes

In what sequence should the developer perform the tasks, so that the custom Site displays the products as intended?

* Task A, then C, then B
* Task B, then C, then A
* Task A, then B, then C
* Task B, then A, then C

NO.86 A job executes a pipeline that makes calls to an external system.

Which two actions prevent performance issues in this situation? Choose 2 answers
* Use asynchronous import or export jobs.
* Use synchronous import or export jobs
* Configure a timeout for the script pipelet.
* Disable multi-threading.
