* Database dump files
* localextensions.xml file
* JDBC log files
* local.properties file

QUESTION 26

What must you do when you provide a workaround for a code glitch in an existing service, for example, ProductService?Note: There are 3 correct answers to this question.
* Modify the existing bean definition with the new service.
* Add a new bean definition with a new ID for the new service.
* Implement a new custom service by extending the existing service.
* Override the alias of the original bean definition.
* Replace all injections with a new ID for the new service.

QUESTION 27

Which of the following does Product Support consider to be a workaround?Note: There are 2 correct answers to this question.
* The support engineer provides guidelines on how to implement and configure a custom Spring bean overriding the default behavior in SAP Commerce.
* The support engineer provides an alternative solution that resolves at least the basic processes of the affected feature.
* The support engineer provides the customer with the official SAP Commerce patch that includes the fix.
* The support engineer provides guidelines on how to modify the code of the affected feature.

QUESTION 28

Where can you check the SAP Commerce platform version?Note: There are 2 correct answers to this question.
* In the bin/platform/build.number file.
* In the bin/platform/project.properties file.
* In the Administration Console.
* In the command line by running the ant-version.

QUESTION 29

A customer reports a performance problem with DefaultStockService. After checking the customer’s system by running SELECT COUNT(*) FROM {StockLevelHistoryEntry}, you discover that there are hundreds of millions of instances of StockLevelHistoryEntry.What would you do to resolve this performance issue?Note: There are 2 correct answers to this question.

* Delete the content of the StockLevelHistoryEntry table directly from the database to immediately improve performance.
* Implement a CronJob that will clean the StockLevelHistoryEntry table according to customer business needs.
* Suggest an improvement by creating a maintenance request for the customer.
* Run Cleanup Type System in the SAP Commerce Administration Console.

QUESTION 30

How do you configure SAP Commerce cluster settings?Note: There are 2 correct answers to this question.
* Specify exactly the same cluster settings for each node in the

%HYBRIS_BIN%/config/local.properties file.
* Specify the cluster settings in the %HYBRIS_BIN%/config/local.properties file for each cluster node.
* Set the cluster.node.autodiscovery to True in order to enable cluster ID autodiscovery.
* Specify the cluster settings of each cluster node in the

%HYBRIS_BIN%/config/tomcat/conf/server.xml file.

QUESTION 31

A customer reports an incident where the SAP Commerce system crashes in production. The customer provides the following log:

What would you advise the customer to do to avoid this happening again?
* Configure the auto reconnect property in the JDBC properties to reconnect to the database automatically.
* Modify the FlexibleSearch query that fetches catalogs to fix the syntax errors.
* Increase the number of connections in the pool if the current number is NOT sufficient.
* Fix the missing links between related items in the catalog.

QUESTION 32

You are troubleshooting a connection pool issue.How do you investigate this issue?Note: There are 3 correct answers to this question.
* Request heap dumps.
* Check the physical connections.
* Request console log files and thread dumps.
* Check the configuration parameters related to connection pool.
* Request database dumps.

QUESTION 33

How do you persist changes to enable and disable JDBC logging?
* SAP Commerce Administration Console
* Java code
* Configuration properties file
* Backoffice Administration Cockpit

QUESTION 34

In the SAP Commerce cache, how does invalidation work on a product type?Note: There are 2 correct answers to this question.

* Cached Product items updated during the import are invalidated in all connected SAP Commerce cluster nodes and are reloaded from the database when it is used next.

* All cached FlexibleSearch results where Product type is included are invalidated because the result set might have changed.

* Cached Product items updated during the import are invalidated only in the node where the import is running.

* All cached FlexibleSearch results are invalidated from the query results region because the result set might have changed.

QUESTION 35

What are the recommended tools to enable JDBC logs in SAP Commerce?Note: There are 3 correct answers to this question.
* Configuration properties file
* ImpEx
* Backoffice Administration Cockpit
* SAP Commerce Administration Console
* Java code

QUESTION 36
