Realistic B2C-Commerce-Developer Exam Dumps with Accurate & Updated Questions

Salesforce B2C-Commerce-Developer certification is intended for developers who have experience in developing e-commerce solutions using Salesforce B2C Commerce Cloud. Candidates who hold this certification are expected to have a deep understanding of the platform's architecture, data model, and APIs. They should also be proficient in developing customizations and integrations to meet the unique needs of their clients.

NO.11 A client that sells sport shows wants to allow its customers to filter products based on the intended activity (such as tennis, jogging, basketball, etc.) but this particular information is not present in the current catalog.

Which two actions does a developer need to perform in a B2C Commerce instance to allow this two happen?

- * Create a new Product custom attribute AND add a new Search Refinement Definition for the desired categories.
- * Create a new ProductRefinement custom attribute AND add a new Search Refinement Definition for the desired categories.
- * Create a new Product custom attribute AND add a new viewtype in the storefront catalog settings

NO.12 The Home-Show route uses this middleware chain:

```
server.get('Show', consentTracking.consent, cache.applyDefaultCache, function (req, res, next) {  
    // base code here  
});
```

The developer added Home.s in another cartridge, which is before the original cartridge in the cartridge path, to extend that route but it does not have the middleware chain:

```
server.append('Show', function (req, res, next) {  
    // custom code here  
});
```

Assuming the code is correct on both functions, what is the expected result?

- * A RunTime error is thrown, “Error: Params do not match route”.
- * The base code executes and then the custom code executes.
- * The custom code executes and then the base code executes.
- * The base code executes, but the custom code is ignored because the signature lines do not match.

NO.13 When inspecting the weekly service status report for a critical internally hosted web service used in the application, a developer notices that there are too many instances of unavailability.

Which two solutions can reduce the unavailability of the service?

Choose 2 answers.

- * Update the service to have a faster response time.
- * Modify the code that makes the request to the external service to be wrapped in a try/catch block.
- * Increase the web service time out
- * Change the code that sets the `throwOnError` attribute of the service to be true.

setThrowOnError

setThrowOnError() : [Service](#)

Forces a Service to throw an error when there is a problem instead of returning a Result with non-OK status.

Returns:

this Service.

NO.14 Universal Containers specifies a new category hierarchy for navigating the digital commerce storefront. A Digital Developer uses Business Manager to manually create a catalog with the specified category hierarchy, then uses the Products & Catalogs > Import & Export module to export the catalog as a file.

How can other Developers with sandboxes on the same realm create the same catalog in their own sandboxes?

- * Use Business Manager to upload and import a copy of the export file obtained from the original Developer.
- * Use the remote upload capability of the Site Import & Export module of Business Manager.
- * Use the Business Manager Data Replication module to replicate the catalog from the original Developer's sandbox.
- * Use the import capability of the Site Import & Export module of Business Manager.

NO.15 A client uses tax tables in Business Manager to calculate tax. They recently started shipping to a new country, Italy, and the tax is not being calculated correctly on the Storefront. What is the likely problem?

- * Tax Region is configured wrong.
- * Tax Country is missing
- * Tax Jurisdiction is missing
- * Tax Locale is configured wrong

NO.16 Given a job step configured in the steptype.json, a developer needs to add a custom status code 'NO_FILES_FOUND'.

Which code snippet will complete the requirement?

- * `var status = {success: 'OK', Message: 'NO_FILES_FOUND'};`

`return status;`

- * `var status = require('dw/system/status');`

`return new Status(Status.OK, 'NO_FILES_FOUND');`

- * `this.status = 'NO_FILES_FOUND';`

`return this;`

- * `return 'NO_FILES_FOUND'`

The screenshot shows the documentation for the `Class Status` in the `Package dw.system`. It includes an `Object` section with `dw.system.Status` and a description: "A Status is used for communicating an API status code back to a client. A status consists of multiple StatusItem. Most often a Status contains only one StatusItem. For convenience, a message with parameters locale-specific messages in your application, you should use the Status.getCode() as key for a resource bundle." Below the documentation, there is a code snippet: `static OK : Number`. A blue callout box points to the `Number` value, stating "status value to indicate an OK status". A large watermark "certify.vceprep.com" is overlaid on the image.

NO.17 Which code sample is required to use a custom tag provided in SiteGenesis in an ISML template?

- * `<isinclude url='URLUtils.url('CustomTag-Start)';>`
- * `<isscript>`

```
dw.util.CustomTagMgr.createCustomTag(&#8220;mytag&#8221;); <isscript>  
* <isinclude template=&#8221;util/modules&#8221;.>  
* <isinclude template=&#8221;util/customtags&#8221;.>
```

NO.18 A Digital Developer noticed that cartridges in their workspace are NOT executing. The Developer confirms that the cartridges are uploaded to the B2C Commerce server connection's target version directory.

Which action potentially solves this problem?

- * Set the active code version to use the latest compatibility mode.
- * Remove invalid characters from cartridge file and folder names.
- * Set the server connection's target version directory to the active code version.
- * Remove invalid characters from the code version's name.

NO.19 Given the following ISML example, how should a developer reference the product object in the current iteration of the basket?

```
<isloop items =&#8221;${pdict.Basket.products}&#8221; var=&#8221;product&#8221; status= &#8220;loopstatus&#8221;.>  
&#8230;
```

```
</isloop>
```

- * product
- * pdict.Basket.products {loopstatus}
- * loopstatus.product
- * pdict.product

```
<isloop iterator = "${pdict.Basket.products}" alias = "product">  
<isprint value = "${product.name}" > <BR>  
</isloop>
```

NO.20 A Digital Developer needs to add a new form to the shopping cart page to allow customers to enter their rewards pass ID. There is already an existing Cart.js controller that handles processing of the other cart forms.

In addition, a formfield node is in the form XML and the necessary form input is present in the ISML template.

The code below is the submit button for the ISML markup.

```
<button type="submit" value="${pdict.CurrentForms.cart.addRewardPass.htmlName}"  
name="${pdict.CurrentForms.cart.addRewardPass.htmlName}">  
  ${Resource.msg('rewards.apply','locale',null)}  
</button>
```

What additional steps must occur before the Digital Developer can begin writing the processing code for this request?

A

- Add an `<action />` node to the form definition XML with the attribute `formid="addRewardPass"`
- Add the key `addRewardPass`, with a processing function as a value, to the object passed to the `Form.handleAction()` method in the `Cart.js` controller

B

- Add a `<submit />` node to the form definition XML with the attribute `formid="addRewardPass"`
- Add the key `addRewardPass`, with a processing function as a value, to the object passed to the `Form.handleAction()` method in the `Cart.js` controller

C

- Add the attribute `add1-form-action="addRewardPass"` to the ISML form
- Add the key `addRewardPass`, with a processing function as a value, to the object passed to the `Form.handleAction()` method in the `Cart.js` controller

D

- Add an `<action />` node to the form definition XML with the attribute `formid="addRewardPass"`
- No change to `Cart.js` controller required

- * Option A
- * Option B
- * Option C
- * Option D

NO.21 A Digital Developer extends a system object, `Product`, and adds a Boolean attribute, `sellable`; to it. Assuming

`prod`, is the variable name handling the product, what code can the Developer use to access it?

- * `prod.sellable`
- * `prod.persistable.sellable`
- * `prod.custom.sellable`
- * `prod.extended.sellable`

NO.22 Universal Containers wants to add a model field to each product. Products will have locale-specific model values. How should the Digital Developer implement the requirement?

- * Set the model field as a localizable attribute.
- * Store translated model values in different fields; one field for each locale.
- * Add model to a new custom object with localizable attributes.
- * Utilize resource bundles for translatable values.

NO.23 Consider the following information:

- * A merchant has this three-tier category structure setup in the Storefront catalog:

New Arrivals > Women > Clothing

- * The category named Clothing has all the clothing items for Women and is merchandised.
- * A Search Refinement named Newness is correctly configured for the Clothing category.

When a merchandiser views the Clothing category, the Search Refinement appears and Works as expected. However, the merchandiser does not see the Search Refinement when searching for Clothing via the Storefront search.

What is the Reason?

- * There are conflicting Search Refinement definitions for Clothing and one of its parent categories
- * The Search Refinement definition is not set up for the Women category
- * The Search Refinement definition is not set up for the New Arrivals Category.
- * The Search Refinement definitions is not set up for the Root Category

NO.24 A Digital Developer creates a B2C Commerce server connection in their UX Studio workspace. The Developer adds new cartridges to the workspace, but the cartridges do NOT execute as the Developer expects.

Which three things should the Digital Developer verify to ensure the cartridges are uploaded? (Choose three.)

- * The Auto-Upload setting is enabled for the server connection.
- * The Active Server setting is enabled for the server connection.
- * The credentials for the server connection are correctly entered.
- * The cartridge is for the current version of B2C Commerce.
- * The server is configured to accept incoming connections.

NO.25 A merchant uploads an image using the Content Image Upload module of Business Manager.

Which three modules can the merchant or developer use to display the image on the Storefront?

Choose 3 answers

- * ISML templates
- * Content assets
- * Storefront catalogs
- * Content slots
- * Payment types

Salesforce Certified B2C Commerce Developer certification is intended for developers who work in a variety of roles, including e-commerce developers, web developers, software engineers, and architects. Salesforce Certified B2C Commerce Developer certification focuses on testing the candidates' ability to develop, implement, and maintain e-commerce solutions using Salesforce B2C Commerce Cloud. B2C-Commerce-Developer exam covers a range of topics, including e-commerce development, object-oriented programming, and front-end development.
