* True

* False

NO.21 The FindSkill() function is not case sensitive when performing a search.

* True

* False

NO.22 Which definition matches the ACD Evaluation Method Best Available Skills?

* Looks for the first available agent and ignores any skill requirements

* Matches the interaction to the first available agent who has all of the requested skills

* Evaluates the first 100 agents to find the agent with the highest average proficiency rating. The average is calculated using the agent's proficiency rating for each of the requested skills

Explanation

ACD routes interactions based on the highest average proficiency level for the requested skills. Genesys Cloud evaluates the first 100 agents to find the agent with the highest average proficiency rating. Genesys Cloud then calculates the average using the agent's proficiency rating for each of the requested skills.

NO.23 The Utilization feature of Genesys Cloud allows administrators to configure: (Choose three.)

* The maximum capacity that an agent may handle simultaneously for each supported media type

* The after call work time for each media type
