

[Full-Version 2023 New VCEPrep C-IBP-2305 PDF Recently Updated Questions [Q15-Q30]

[Full-Version] 2023 New VCEPrep C-IBP-2305 PDF Recently Updated Questions
C-IBP-2305 Exam with Guarantee Updated 86 Questions

SAP C-IBP-2305 Exam Syllabus Topics:

TopicDetailsTopic 1- Optimize the integration scenarios and architecture of your planning solution- Solution Architecture & Data IntegrationTopic 2- Key Figures & Attributes- Optimize inventory in the supply chain utilizing algorithms that derive inventory targetsTopic 3- Create and transform forecasts in your planning model- Display, create, copy, edit, check, and activate a planning areaTopic 4- Configure supply planning, run various solvers to generate planning results- Use the Fiori Launchpad to customize the UI, work with Excel UITopic 5- Define and view information with user-defined charts and dashboards- Configure and use Planning Operators to automate processes in your planning model

NO.15 Which of the following checks for master data and key figures does the Check Mode algorithm trigger?Note: There are 3 correct answers to this question.

* It checks whether the location products specified in the master data are connected by customer sourcing rules within the supply chain network.

- * It checks whether the location resource specified in the master data forms a cycle in the supply chain network.
- * It checks whether the sourcing in the Production Source Item Master Data type exists.
- * It checks whether the heuristic detects cycles formed by nodes (such as location products) in the supply chain network.
- * It checks whether the required planning level master data exists for a subset of input key figures.

NO.16 What are some of the prerequisites for configuring a planning area that results in a successful consistency check?Note: There are 2 correct answers to this question.

- * Configure at least one calculated key figure for the planning area.
- * Specify a planning horizon in the planning area for each level of the assigned time profile.
- * Configure at most two input key figures on the same planning level in a key figure calculation.
- * Assign the compound master data type and its component master data types.

NO.17 Analytics charts are created by the user in the Advanced Analytics application.What can the user do in the Advanced Analytics app?Note: There are 2 correct answers to this question.

- * Group data.
- * Open graphics in Excel.
- * Apply filters on your data.
- * Merge charts together.

NO.18 SAP IBP ensures interoperability with which applications?Note: There are 2 correct answers to this question.

- * Salesforce Sales Cloud
- * User management in SAP Success Factors
- * Financial Planning in SAP Analytics Cloud
- * Business Network in SAP Ariba

NO.19 What is a prerequisite for modeling outsourced manufacturers with production capacity using the Supply Optimizer?

- * Use production lead times and offsets to manage components at the outsourced manufacturing location
- * Ensure that the outsourced manufacturing locations have a separate subnetwork
- * Model target inventory and stocks at the outsourced manufacturing location
- * Model relative production costs across internal locations and outsourced manufacturing locations

NO.20 You are working on a mid-range plan that spans the seasonal peak and you are evaluating the need for additional crewing.Which of the following parameters can you model to plan production with extra shift(s)?

- * Capacity expansion with additional costs
- * Adjusted production interactive values
- * Incremental production values
- * Production source validity at the start of seasonal peak

NO.21 Which of the following checks for master data and key figures does the Check Mode algorithm trigger?Note:

There are 3 correct answers to this question.

- * It checks whether the location products specified in the master data are connected by customer sourcing rules within the supply chain network.
- * It checks whether the location resource specified in the master data forms a cycle in the supply chain network.
- * It checks whether the sourcing in the Production Source Item Master Data type exists.
- * It checks whether the heuristic detects cycles formed by nodes (such as location products) in the supply chain network.
- * It checks whether the required planning level master data exists for a subset of input key figures.

NO.22 Which of the following are capabilities of the Manage Forecast Error Calculations & Inventory Optimization app?Note: There are 2 correct answers to this question.

- * Adjust for forecast bias in Forecast Error CV calculations
- * Propagate forecast error to upstream locations in a supply chain network
- * Adjust Safety Stock Recommendations based on forecast error CV input
- * Identify intermittent demand for Forecast Error CV calculations

NO.23 You are starting a new implementation project for SAP IBP and are considering the possible system architecture. What are the possible approaches for setting up the system landscape? Note: There are 2 correct answers to this question.

- * Create additional planning areas in the test system to support training needs.
- * Set up a three-tier landscape using transport, starting from the development system to test and production.
- * Set up a two-tier landscape, and have the configuration of the development system regularly updated from the production system.
- * Create additional test planning areas in the production system to support cutover needs.

NO.24 Which sourcing methods are required to identify the product flow through the network? Note: There are 3 correct answers to this question.

- * Sourcing via Costs
- * Customer Sourcing Rule
- * Sourcing via Production
- * Unspecified Sourcing
- * Sourcing via Demand Prioritization

NO.25 Safety Stock outputs from Multistage Inventory Optimization are sent to which of these processes? Note:

There are 2 correct answers to this question.

- * Decoupling Points determination in SAP IBP for demand-driven replenishment
- * Supply Heuristics in SAP IBP for sales and operations
- * Charts creation in SAP Supply Chain Control Tower
- * Demand Sensing with Gradient Boosting (Full)

NO.26 You are adding a value-based filter to a planning view. Which of the following conditions apply? Note: There are 3 correct answers to this question.

- * You can only apply one value-based filter per planning view.
- * The alerts dashboard is not available if a value-based filter is set for the open planning view.
- * You can add (or delete) planning objects to a planning view after these filters are applied.
- * These filters can be used together with attribute totals in the same planning view.
- * These filters are always applied based on the values stored in the database.

NO.27 Where can the results of a Time Series Analysis be used? Note: There are 2 correct answers to this question.

- * During XYZ segmentation in the Manage ABC/XYZ Segmentation Rules app
- * In Global (multi-stage) Inventory Optimization to calculate time-phased Recommended Safety Stock Outputs
- * In the Manage Forecast Error Calculations app & Demand Planning app to calculate the Forecast Error CV
- * In the Microsoft Excel add-in, where you can use them to limit and filter your planning views

NO.28 For your project, you create a new planning area and consider how to create analytics and alerts for it. How can you create these objects?

- * Use the option for copying analytics and alerts into the new planning area from the existing custom planning area.
- * Create analytics and alerts in the new planning area from scratch using the Intelligent Visibility application.
- * Use the option for copying analytics and alerts when creating a new planning area from the sample SAPIBP1.
- * Merge analytics and alerts into a new planning area from any sample planning area.

NO.29 Which of the following conditions are relevant for subtotals in the planning view? Note: There are 2 correct answers to this

question.

- * The total number of attributes that can use subtotals in the planning view can be restricted.
- * The values of the attribute-based total at the highest attribute level in the planning level can be changed.
- * Only attribute-based totals can be added to the planning view.
- * The total value can be added before or after the selected attribute.

NO.30 Safety Stock outputs from Multistage Inventory Optimization are sent to which of these processes? Note: There are 2 correct answers to this question.

- * Decoupling Points determination in SAP IBP for demand-driven replenishment
- * Supply Heuristics in SAP IBP for sales and operations
- * Charts creation in SAP Supply Chain Control Tower
- * Demand Sensing with Gradient Boosting (Full)
