Verified & Latest VCS-285 Dump Q&As with Correct Answers

NEW QUESTION 131

Where in the NetBackup Administration Console should an administrator look to determine whether an AdvancedDisk storage server is configured?

- * NetBackup Management > Storage
- * Media and Device Management > Device Monitor
- * Media and Device Management > Devices
- * Media and Device Management > Credentials

NEW QUESTION 132

What are the benefits of using Anomaly Detection?

- * It can identify potential threats before they cause damage.
- * It can analyze historical data to identify trends.
- * It can generate alerts to notify administrators of potential problems.

- * All of the above

NEW QUESTION 133

Which guide should be referred to for configuring deduplication options in NetBackup 10.1?

- * Veritas NetBackup Deduplication Guide: v10.1
- * Veritas NetBackup Appliance Administrator's Guide: v5.0
- * Veritas NetBackup 10.1 Administrator's Guide, Volume I
- * Veritas NetBackup Appliance Commands Reference Guide: v5.0

NEW QUESTION 134

What is the certificate deployment and management behavior when the security level is set to High?

- * Certificates are deployed automatically for known hosts and the Certificate Revocation List (CRL) is refreshed every 4 hours.
- * Certificates are deployed automatically for all hosts and the Certificate Revocation List (CRL) is refreshed every hour.
- * Certificates are deployed automatically for known hosts and the Certificate Revocation List (CRL) is refreshed every hour.
- * Certificates are deployed with a token for all hosts and the Certificate Revocation List (CRL) is refreshed every 4 hours.

NEW QUESTION 135

How can you manage NetBackup disk and cloud storage?

- * Use the NetBackup administration console to create and manage storage policies.
- * Use the NetBackup administration console to allocate storage resources to backup jobs.
- * Use the NetBackup command line to manage storage.

NEW QUESTION 136

Which guide should be referred to for analyzing and optimizing NetBackup Appliances using the Appliance Shell Menu (CLISH)?

- * Veritas NetBackup Deduplication Guide: v10.1
- * Veritas NetBackup Appliance Administrator's Guide: v5.0
- * Veritas NetBackup 10.1 Administrator's Guide, Volume I
- * Veritas NetBackup Appliance Commands Reference Guide: v5.0

NEW QUESTION 137

A NetBackup restore job is failing with the message 'Unable to find backup file'. What could be the cause of this error?

- * The backup file is not accessible.
- * The backup file is corrupted.
- * The client does not have permission to access the backup file.
- * The client is not configured to use the backup file.

NEW QUESTION 138

What is the difference between a disk pool and a storage unit in NetBackup?

- * A disk pool is a logical grouping of disk volumes, while a storage unit is a physical device that stores backup data.
- * A disk pool is a physical device that stores backup data, while a storage unit is a logical grouping of disk volumes.
- * A disk pool is a logical grouping of disk volumes, while a storage unit is a logical entity that references one or more disk pools.
- * A disk pool is a logical entity that references one or more storage units, while a storage unit is a logical grouping of disk volumes.

NEW QUESTION 139

Which resource should be used for analyzing and optimizing NetBackup Appliances?

- * Veritas NetBackup Deduplication Guide: v10.1
- * Veritas NetBackup Appliance Administrator's Guide: v5.0
- * Veritas NetBackup 10.1 Administrator's Guide, Volume I
- * Veritas NetBackup Appliance Commands Reference Guide: v5.0

NEW QUESTION 140

Which feature is enabled after adding a master server to the Trusted Master Servers tab?

- * backup of clients in other master server domains
- * remote console to another master server
- * targeted Auto Image Replication
- * remote catalog backups

NEW QUESTION 141

How can you mitigate the security risks associated with NetBackup appliances?

- * Use strong passwords
- * Enable authentication
- * Encrypt data
- * All of the above

NEW QUESTION 142

What is the role of storage unit groups in NetBackup?

- * To define the physical location of the storage units in the backup environment
- * To specify the backup schedule for storage units
- * To manage the retention period and lifecycle of backup data
- * To provide load balancing and failover for backup jobs

Explanation

(Explanation: Storage unit groups in NetBackup enable load balancing and failover for backup jobs, by allowing you to define multiple storage units for a backup policy and specify the order in which they are used for backups.)

NEW QUESTION 143

A NetBackup environment with a single tape storage unit is experiencing performance issues when running full backups of a Windows file server with over a million small files. Backups for all other clients on the same network are performing adequately. What should the administrator modify to improve performance for the client?

- * enable Windows Change Journal
- * configure multiplexing
- * enable the Use Accelerator policy attribute
- * use Flashbackup-Windows policy type

NEW QUESTION 144

What is the purpose of the checkpoint restart feature in NetBackup?

- * It allows NetBackup to resume a backup job from the last checkpoint if the job fails or is interrupted.

- * It allows NetBackup to verify the integrity of a backup image by comparing it with a checkpoint file.
- * It allows NetBackup to split a large backup job into smaller chunks that are marked by checkpoints.
- * It allows NetBackup to perform incremental backups by tracking the changes since the last checkpoint.

NEW QUESTION 145

Which type of backup schedule is available when using the "After each backup session" schedule type for an NBU-Catalog policy type?

- * Full
- * Differential Incremental
- * Vault Catalog Backup
- * Application Backup

NEW QUESTION 146

What is the name of the command that lets you test the connectivity between primary, media, and client servers in NetBackup?

- * bpcIntcmd
- * bpmediasv
- * bptestnetconn
- * bptestbpcd

NEW QUESTION 147

An administrator has a master server named master1. When the administrator runs the bpcIntcmd -pn command on the client, the administrator receives the following output:

```
bpcIntcmd -pn
```

```
expecting response from master2
```

```
client_01.domain.com client_01 192.168.0.30 3815
```

What is a possible cause for this output?

- * The host file needs to be changed on the master server.
- * The client has lost connectivity to the master server.
- * The SAN connection to the master server needs to be configured.
- * The bp.conf of the client needs to be updated.

NEW QUESTION 148

Which two tasks can be performed from the Appliance Web Console? (Select two.)

- * run a manual backup
- * create a backup policy
- * add or delete additional servers
- * create a storage lifecycle policy
- * resize the MSDP partition
