

The New NS0-303 2024 Updated Verified Study Guides & Best Courses [Q74-Q89]

The New NS0-303 2024 Updated Verified Study Guides & Best Courses Authentic NS0-303 Exam Dumps PDF - 2024 Updated

The NS0-303 certification exam is an essential credential for IT professionals who want to advance their careers in hybrid cloud management. It is an industry-recognized certification that validates the skills and knowledge required to manage complex hybrid cloud environments using NetApp technologies. By earning this certification, professionals can demonstrate their expertise in hybrid cloud administration and increase their earning potential.

NEW QUESTION 74

You are using a NetApp HCI and are asked to perform offsite backups of all data. Which three targets satisfy this requirement? (Choose three.)

- * ONTAP9.5
- * Amazon Redshift
- * Azure Blob
- * Amazon S3
- * Element software

NEW QUESTION 75

You deployed Cloud Volumes ONTAP BYOL with an aggregate that has a single 8 TB disk. You start copying 12 TB of data to the instance- However, the data copy fails, and an out-of-space message is displayed.

In this scenario, which statement is correct?

- * The Aggregate Free Space Ratio for Data Tiering is set to 25%.
- * The Capacity Management Mode is set to Manual.
- * The Aggregate Free Space Ratio is set to 5%.
- * The Capacity Management Mode Is set to Automatic.

NEW QUESTION 76

You are the administrator for your IT organization's cloud infrastructure. You need to deploy Cloud Volumes ONTAP to your AWS infrastructure.

In this situation, what is the first tool you need, to deploy Cloud Volumes ONTAP?

- * OnCommand Unified Manager
- * OnCommand Cloud Manager
- * OnCommand System Manager
- * OnCommand Insight

NEW QUESTION 77

You have a Cloud Volumes ONTAP HA pair that is provisioned in multiple availability zones. All components of the ONTAP cluster are eligible for update. In this scenario, which two actions are performed during the upgrade when you use the default update options? (Choose two.)

- * The HA pairs serve data during the upgrade process.
- * The HA mediator is updated.
- * The SnapMirror transfers continue during the upgrade process.

- * The software image is pushed using HTTP

NEW QUESTION 78

You are modifying the service level from standard to premium. In this situation, which two Cloud Volumes Service parameters are modified? (Choose two.)

- * capacity per volume
- * IOPs per second
- * megabytes per second
- * disk type

NEW QUESTION 79

You are deploying a Cloud Volumes ONTAP HA system that uses multiple Availability Zones In AWS. You want to make sure that you can access the floating IP addresses in your Virtual Private Cloud (VPC. from your other VPCs in the same AWS region in which you have deployed your Cloud Volumes ONTAP HA system.

How do you accomplish this task?

- * Create peering between your VPCs using the AWS console.
- * Use OnCommand Systems Manager to make floating IP addresses accessible between your VPCs.
- * Use OnCommand Cloud Manager to make floating IP addresses accessible between your VPCs.
- * Use the AWS Transit Gateway service to create a route to your floating IP addresses.

NEW QUESTION 80

You have a 100 TB Cloud Volumes Service NFS volume called voll. You are asked to create a second read/write test copy of the volume called voll_test.

In this scenario, what is the fastest supported method to create voll_test?

- * Create voll_test from a Snapshot copy.
- * Use rsync to copy voll to voll_test.
- * Use Cloud Sync to synchronize voll to voll_test.
- * Use SnapMirror to mirror voll to voll_test.

NEW QUESTION 81

Which hypervisor would be deployed using NetApp Deployment Engine?

- * Red Hat Virtualization
- * VMware vSphere
- * Citrix Xen
- * KVM Correct

NEW QUESTION 82

Which storage protocol is supported by Azure NetApp Files?

- * iSCSI
- * NVMe
- * FC SAN
- * NFS v3

NEW QUESTION 83

You are an administrator of two NetApp HCI systems in different data centers. You are asked to replicate volume data between the two data centers.

Which two requirements must be satisfied before completing this task? (Choose two.)

- * All volumes chosen for replication must be thin provisioned in advance.
- * All management and storage networks must be routed to each other.
- * You must have the peering license installed on both clusters.
- * You must have cluster administrator privileges to one or both clusters being paired.

NEW QUESTION 84

You are deploying Cloud Volumes ONTAP HA in AWS with one node of the HA pair in us-west-2a and the other node in us-west-2b. You will create an SMB share on one of the nodes.

In this scenario, what is the minimum number of floating IP addresses required for data access and cluster management operations?

- * 1
- * 2
- * 4
- * 3

NEW QUESTION 85

You are operating a NetApp AFF system. You are creating Snapshot copies on all volumes every four hours. You keep the copies for 30 days. You also have StorageGRID installed with available capacity. You are running out of disk space and want to free up space in the most cost effective way without losing any Snapshot copies.

In this scenario, which statement is correct?

- * Add additional SSDs to your aggregates.
- * Add a tape library and copy the Snapshot copies to it every day.
- * Deactivate Snapshot copies on all volumes.
- * Add an external capacity tier to your aggregates and set the tiering policy to snapshot-only.

NEW QUESTION 86

You have a cloud-connected storage system that is located in a collocation facility that uses AWS Direct Connect. The AWS Direct Connect circuit is already configured and you want to verify that your compute nodes in AWS are able to connect to the volumes created on the storage. You want to verify connectivity using the NFS protocol.

In this scenario, what are three solutions? (Choose three.)

- * Write a text file and save it to the NFS export.
- * Use OnCommand Systems Manager to test NFS connectivity
- * Connect a remote desktop session to the export.
- * Create a NFS export and use the AWS VM Instance to mount the export.
- * Launch an AWS VM instance running Linux in the VPC that is connected to the AWS Direct Connect network.

NEW QUESTION 87

You deploy a pay as-you-go instance of Cloud Volumes ONTAP. You have an cannot be found.

In this scenario, what caused this problem?

- * Your instance does not have AutoSupport enabled.
- * Your instance is tagged to an unsupported availability zone.
- * Your instance naming convention does not meet standards.
- * Your instance has not been linked to your NetApp Support account.

NEW QUESTION 88

You are the administrator of a company's public cloud infrastructure and cloud connected storage system. You provision Windows Server 2019 Azure VMs. You want to configure your cluster to use a traditional Windows cluster and support Cluster Shared Volumes;

To provision this service, you need to set up the NetApp storage to use which connection protocol?

- * Fiber Channel (FC) connectivity to block-based storage
- * NFS export to a NAS share
- * NVMe connectivity over fabric to block-based storage
- * iSCSI connectivity to block-based storage

NEW QUESTION 89

Click the Exhibit button.

	STANDARD	PREMIUM	EXTREME
IOPS	4,000 IOPS Per TB (4K IO)	16,000 IOPS Per TB (4K IO)	32,000 IOPS Per TB (4K IO)
Max Read Throughput	16MB per TB	64MB per TB	128MB per TB
Max Write Throughput	16MB per TB	64MB per TB	128MB per TB
Max Capacity Per Volume	100TB	100TB	100TB
Protocols	NFSv3, SMB3	NFSv3, SMB3	NFSv3, SMB3
Encryption (Data at Rest)	✓	✓	✓
Snapshot & Copies	✓	✓	✓

Your customer has chosen Premium Performance Tier on AWS Cloud Volume Services for a database requiring 15,000 IOPS. However, users are reporting that the database performance is very low.

Referring to the exhibit, what should you recommend?

- * Create a second Premium Instance.
- * Upgrade to the Extreme Performance Tier.
- * Disable Data at Rest Encryption.
- * Change the maximum bandwidth in the Premium Tier.
